Hello! I'm 22 years old and I'm a full-stack developer. I have significant experience in developing modern front-end interfaces and back-end services in TypeScript/JavaScript. Has experience in desktop and mobile app development with the use of modern technologies. Understands what the user needs and how to solve business issues in software development.

Work experience

- **Tegro – Web3 Front-end developer (Feb 2023 - Present).**
 - Create unique user interfaces optimized for maximum usability and performance.
 - Application front-end development, including multilingual functionality, responsive design and code testing.
- **POLUS – Front-end developer (May 2022 - Present).**

Web3 development of front-end using React JS and Vue JS frameworks, and packages such as Ethers.js and Web3.js and SDK development in TypeScript for merchants.

 - Development of user interfaces based on React JS, HTML, CSS.
 - Working on improving the user experience using TypeScript and Web3.
 - Development and testing of contracts using Solidity.
 - development of a highly loaded backend on node.js
 - Participation in the development and design of user interfaces for decentralized financial applications.
- **TonUniverse – Founder & Full-stack developer (Dec 2021 – April 2022).**

My responsibilities in this project includes processes such as – fully TON mining pool back-end implementation, using Express.js, MySQL, Docker e.t.c and full-stack development of UNI NFT Marketplace project (using React JS on front-end and back-end with Express.js framework).

 - Creating your own company and developing a project based on the Ton blockchain.
 - Development team management.
 - Mining pool backend development on node.js.
 - Development and customization of web pages using TypeScript, React JS, Web3, Rest API and other technologies.
- **Cyber Donate – Founder & Full-stack developer (Jul 2018 – Dec 2021).**

Take part in management of business processes. Front-end development of main application using React JS and VK UI frameworks. Qiwi bank payment integration.

 - Payment gateway development.

- Development team management.
 - Work with 3d secure and pci dss.
 - Development and customization of web pages using TypeScript, React JS, Web3, Rest API and other technologies.
- **Freelance – Front-end developer (2017 – Jul 2018).**

My skills

- Hard skills: TypeScript/JavaScript, Express.js, SQL (databases such as MySQL, PostgreSQL), Nginx, Git, Docker, Ethers.js / Web3.js, Experience with smart contracts development based on EVM and TVM blockchains, HTML5, CSS3, React JS, Webpack.
- Soft: Responsibility, Learning, Independence, Communicability.
- Software: Chrome, VS Code, Mac OS, Linux, Windows, Jira, Discord e.t.c.
- Knowledge of languages: Russian (native), English (B1).

Achievements

- Development of unique user interfaces based on Ethereum, resulting in improved user experience and increased usability of applications.
- Creation of contracts based on Solidity and working with Web3, which allowed decentralized applications to function more efficiently and securely.
- Successfully managed a team of developers in the Ton Universe project, which led to the achievement of high quality and project deadlines.
- Development and customization of web pages using TypeScript, React JS, Web3, Rest API and other technologies, which allowed us to achieve a high level of performance and quality of applications.

Thank you for your attention!
