Web3 Software Engineer with 6+ years of experience

Hi, I am a Software Engineer with experience in blockchain projects, including managing projects on the TON blockchain. My expertise includes strategic planning and developing interfaces using technologies such as React JS, TypeScript, and TVM. I coordinate teams for effective interaction, successfully manage multitasking projects, and have experience launching startups in the web3 space, giving me a deep understanding of startup ecosystem dynamics.

Skills

Soft skills

Strategic Planning, Technical Expertise, Project Management, Team Coordination, Innovative Thinking, Startup Experience, Adaptability, Problem Solving, Communication Skills

Hard skills

TypeScript/JavaScript, React JS, Express.js, SQL, Nginx, Git, Docker, Ethers.js / Web3.js, Experience with smart contract development based on EVM and TVM blockchains, HTML5, CSS3, and Webpack

Experience

DeLab

Founder & CEO • Oct, 2022 - Aug 2024

Directions: Ecosystem products of TON

- Managed multiple projects and coordinated between teams to ensure synergy and effective collaboration.
- Effectively managed multitasking and operations, optimizing workflows and communication within the team.
- Web3 TVM development of the front-end with React JS
- Created unique user interfaces optimized for maximum usability and performance.
- Developed front-end applications, including multilingual functionality, responsive design, and code testing.

Polus

Team Lead & Web3 Full-stack developer • May, 2022 - May, 2023

Directions: Crypto payments processing of DEX

- Developed front-end interfaces using React JS, HTML, and CSS.
- Worked on improving the user experience using TypeScript and Web3 (EVM, TVM).
- Developed and tested contracts using Solidity.
- Developed a high-performance backend using Node.js.
- Participated in the development and design of user interfaces for decentralized financial applications.

TonUniverse

Founder & Web3 Full-stack developer • Oct, 2021 - April, 2022

Directions: Mining pool of TON and NFT marketplace

- Founded and developed a project based on the TON blockchain.
- Managed the development team.
- Implemented a fully TON mining pool back-end using Express.js, MySQL, Docker, etc.
- Conducted full-stack development for the UNI NFT Marketplace project (using React JS for the front-end and Express.js for the back-end).
- Developed and customized web pages using TypeScript, React JS, Web3, Rest API, and other technologies.

Cyber Donate

Founder & Full-stack developer • Jul, 2018 - Dec, 2021

Directions: Payment processing service in the banking system

- Participated in business process management.
- Developed the front-end of the main application using React JS and VK UI frameworks.
- Worked with 3D Secure and PCI DSS.
- Developed and customized web pages using TypeScript, React JS, Web3, Rest API, and other technologies.

Freelance

Front-end developer • Jul, 2015 - Jul, 2018

- Developed and implemented front-end solutions for clients' websites and applications.
 - Collaborated with clients to understand their requirements and deliver high-quality results.
 - Utilized technologies such as TypeScript, JavaScript, HTML, CSS, and frameworks like React JS.
-

Languages

English - B2

Russian - Native
